EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In the claims:

Replace claim 1 with the currently amended version.

1. (Currently amended) A method of object recognition using a classifier on a bit-mapped image, comprising:

- identifying objects to be recognized on the bit-mapped image[.];
- preliminarily assigning at least one graphical structure comprising more than one primary graphical unit to be used as a standard element constituent of each object to be recognized[.];
- preliminarily describing each object to be recognized as a set of said standard elements of at least one type along with spatially parametrical correlations thereof[.];
- performing the following steps:
 - search and identification of at least one standard element on the said-bit-mapped image[.];
 - selection of at least one standard element image for testing on as belonging to the object to be recognized[.]; and

setting up and testing a hypothesis about the object to be recognized on the basis of an image formed by aggregating all each selected standard element image taking into account spatially parametrical correlations thereof.

Response to Amendment

2. Applicant's amendment filed 03/03/2011 has been entered and made of record. By this amendment, claim 2 is cancelled. Claims 15-17 are added new. Claims 1 and 3-17 are pending in the application.

In response to applicant's submission of a amended abstract, the objection to specification has been withdrawn.

In response to applicant's amendment to claims 1 and 8, the minor claim objection has been withdrawn.

In response to applicant's cancellation of claim 2, the duplicate claim objection has been withdrawn.

In response to applicant's amendment to claims 1 and 3-14, the claim rejection under 35 USC 112, second paragraph has been withdrawn.

Allowable Subject Matter

3. The following is an examiner's statement of reasons for allowance:

Claims 1 and 3-17 are allowed.

The closest prior art to Albertelli et al. (US 7,058,240 B2) disclose a method for generating classifier comprising: creating a database including location data for a first group of patterns from previously analyzed objects, dimensions for each of the

Art Unit: 2624

previously analyzed objects, and validated previous assignments to one of the number of classes of each pattern from the first group of patterns from previously analyzed objects, normalizing each location datum belonging to one of the patterns from the first group of patterns from previously analyzed objects with respect to dimensions of a corresponding one of the previously analyzed objects, creating a normalized geometric grid normalized to dimensions of an object, deriving predetermined characteristic coordinate data from the normalized location data, and forming a number of probability distributions, based on the assignment of each pattern of the first group of patterns from previously analyzed objects to one of the classes, each one of the probability distributions assigning a frequency of occurrence of one of the predetermined characteristic coordinates in one of the classes to each one of the points in the normalized geometric grid.

Another closest prior art to Andel et al. (US 7,283,669 B2) disclose a method and computer program product for refining character segmentation in an optical character recognition system receiving as input a plurality of candidate objects. Each candidate object below a threshold character width is merged with another candidate object at one or more merge lines to form a composite object. The plurality of candidate objects are pre-classified to identify a plurality of composite objects and a plurality of character portions. Proposed split lines are determined for each of the composite objects. Regions are defined within each of the composite objects from the position of the merge and split lines. The defined regions are classified to obtain an associated score for each region. Complete region sets are defined for each composite object, each with an associated

Art Unit: 2624

set ranking determined from the associated score of the regions comprising the set. The set having the highest ranking is selected. However, both prior art fails to teach or fairly suggest, singly or in combination at least the features of "search and identification of at least one standard element on the said-bit-mapped image, selection of at least one standard element image for testing on as belonging to the object to be recognized, and setting up and testing a hypothesis about the object to be recognized on the basis of an image formed by aggregating all each selected standard element image taking into account spatially parametrical correlations thereof" as recited in claim 1.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
